Sizland Land Acquisition Ecosystem

Data Flow Diagram (DFD) Visual Specification

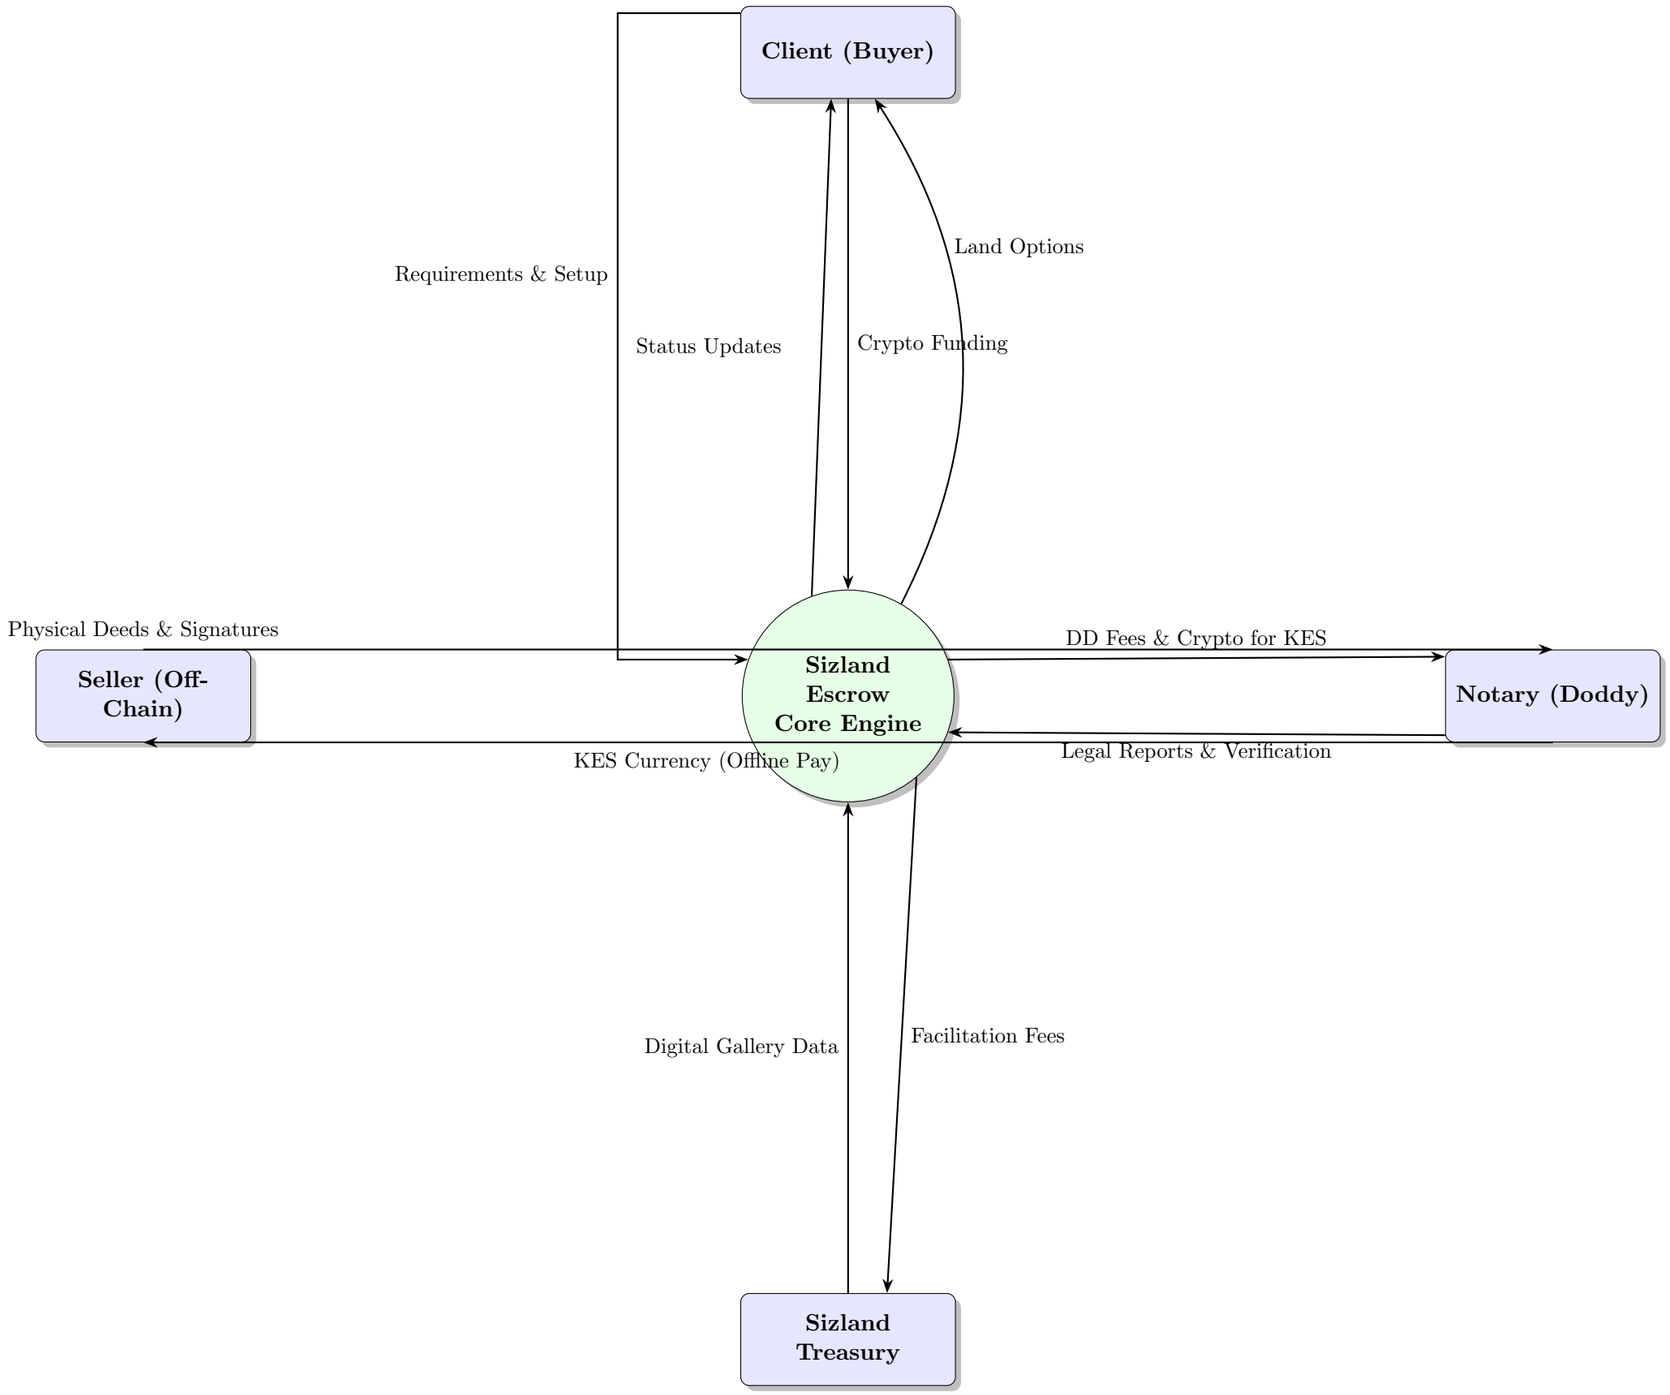

High-Fidelity Architectural Mapping

Document Purpose

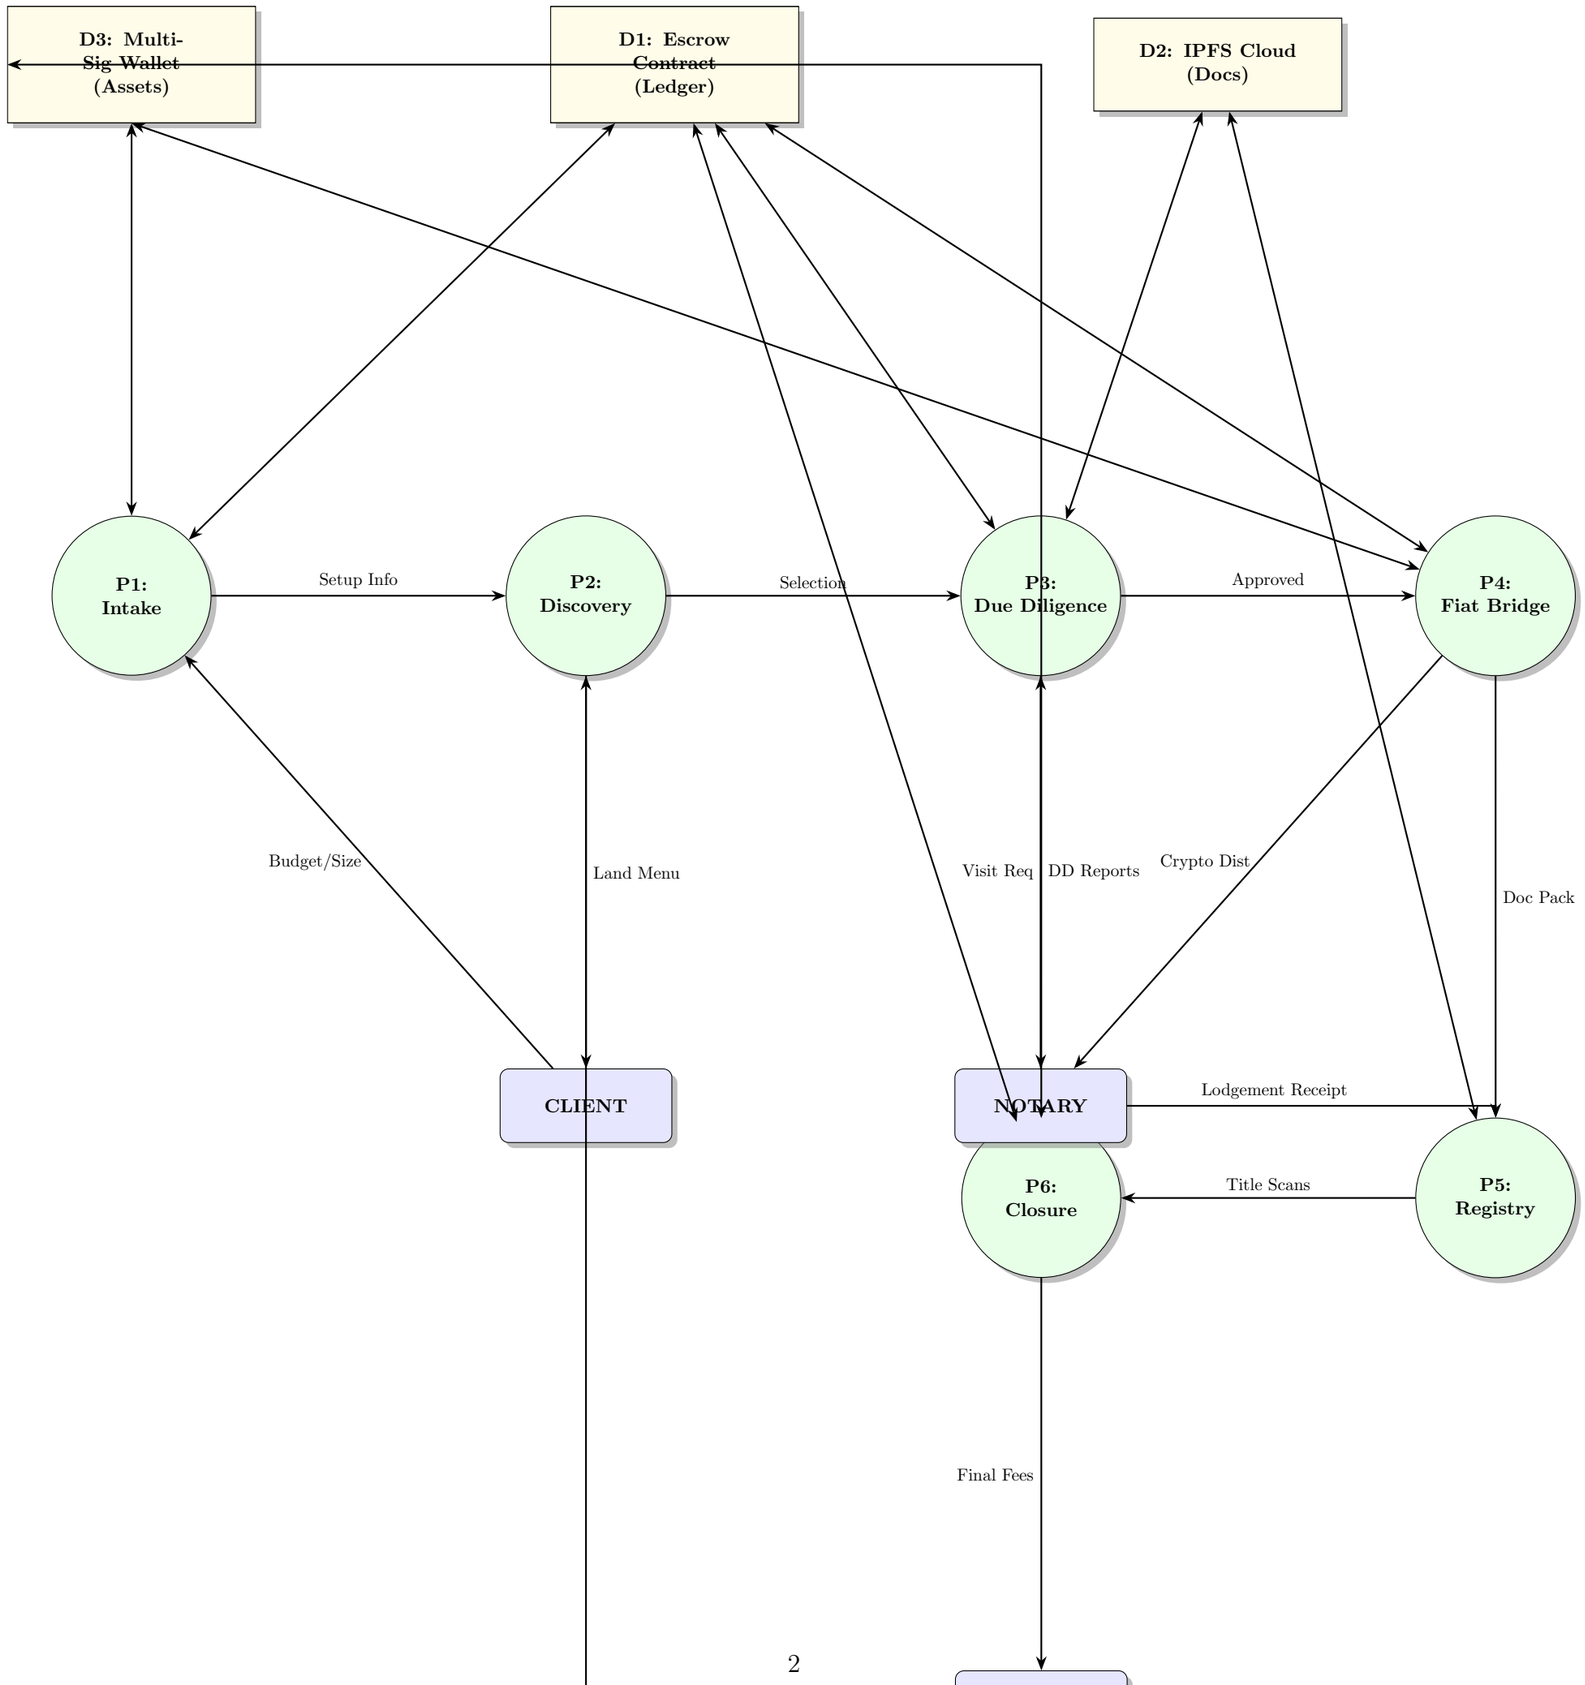

This specification provides a clear, high-resolution mapping of all data interactions within the Sizland Escrow System. It is designed to ensure stakeholders can trace information flow from initial intake to final title delivery without ambiguity.

Version 1.3 - Enhanced Legibility
January 23, 2026

Level 0: Context Diagram (System Ecosystem)

Level 1: Process Layer (Information Architecture)

Technical Flow Specifications

Component Mapping

Ref	Component	Primary Data Responsibility
D1	Escrow Contract	Financial rates, state transitions, security hashes
D2	IPFS Storage	High-resolution maps, deed scans, DD reports
D3	Multi-Sig	Cryptographic asset holding and 2-of-3 release
P1-P2	Selection Phase	Requirement matching and inventory allocation
P3-P4	Verification Phase	Legal search, physical audit, and currency bridge
P5-P6	Transfer Phase	Statutory registration and physical title courier

Data Integrity Controls

All flows represented in this DFD are subject to:

- **Role-Based Access Control (RBAC)**: Verified via Ethereum signatures.
- **Immutability**: All state changes recorded on the blockchain (D1).
- **Mediated Release**: Critical funds flow exclusively through the Multi-Sig (D3).

This architectural blueprint is the definitive guide to information flow within the Sizland system.
